How to adjust the station's current rain total if required

To adjust the CURRENT reading, select Rain Year on the console by pressing the RainYr button. Then press the 2nd key and release then immediately afterwards, press AND HOLD the SET button (it is labeled alarm with the word SET above it). You should see the number for the rain year start to flash. Keep holding until you see the number STOP flashing. Release and then use the plus or minus key to change the flashing numbers value, and the left and right arrows to change WHICH number is flashing. Once you have made the changes, press the DONE key.

To sync with the web page, power down the console, and wait two minutes the repower on the console. Once you see the Receiving From message, press and hold the DONE key.
